

# THE FUTURE OF MOBILITY HAS ARRIVED!

## Introducing, **INTELLIGENT DRIVING ASSISTANT AND SAFETY PLATFORM**

drivebuddyAI is an intelligent driver safety system purpose-built to help commercial fleets and drivers prevent collisions, and the potential losses. Are you ready to use the technology for improving your fleet's safety and improve their performance?

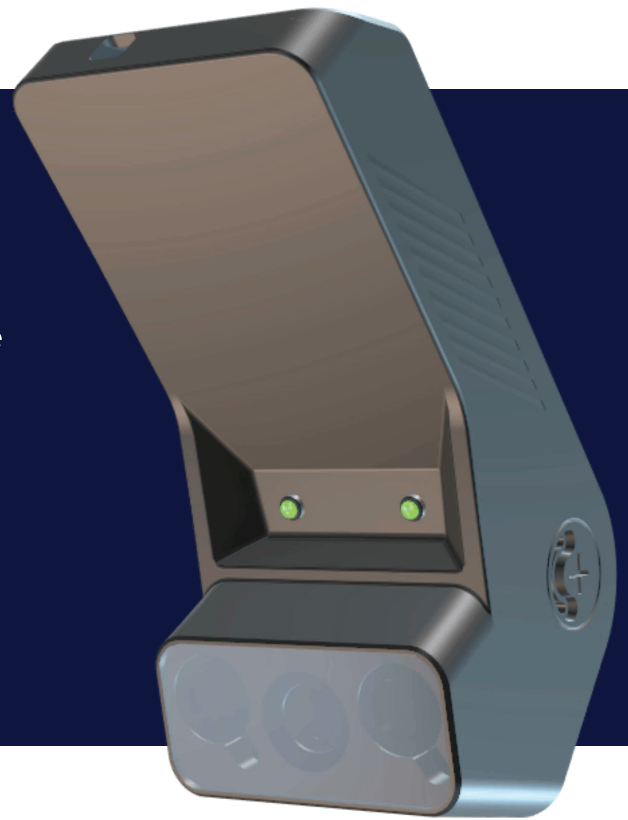

## Value We Create

- Reducing potential losses by preventing collisions
- Improving driver behavior for improving efficiency
- Improving earnings

## drivebuddyAI Device .....

AI powered multi-sensor device that assesses and records every second of driving from the driver's view and the road to detect the driving pattern in real-time. Whether distracted driving, or rash and negligent, it is all recorded for creating personalized in cabin alerts and clever decisions towards safety. This enables driver coaching, for improving the driving behavior and ultimately creating safety on roads.

## Key Features

- AI Powered ADMATICS (TM)
- Support upto 6 cameras for exterior view of the vehicle for surveillance purpose
- Dual HD Camera, GNSS & IMU
- 300° of high-quality video
- LTE connectivity
- OTA updates

### Real-Time Prevention

Preventing collisions before they occur with the industry's one of the automated real-time alerts for the high risk and most common reasons

### Distracted driving

Tap drivers to focus on the road with progressive alerts based on duration of distraction events

### Locating

Coach drivers to keep safe following distances

### High risk warnings

Alert drivers when they are distracted and risks can turn into collisions

### Raising asset productivity

Your drivers are coached for improved driving behavior; making your fleets efficient and hence productive

### Trusted drivers and brand

Safer driving protects your customers, products, and reputation on the road.

# FLEET SAFETY PLATFORM

drivebuddyAI's cloud-based web app provides fleet management and safety leaders with unparalleled visibility into the safety of their fleets and drivers.

## Key Features

- Proprietary AI Algorithms optimized for our patented hardware device
- Actionable safety insights
- Driver report & scorecard
- Curated high-risk event videos
- Automated driver recognition

### Evidence-Based Coaching

Coach drivers with real world evidence to improve driving behavior and reduce collisions

### Liability Protection, by accurate assessment

Protect your fleet against inaccurate and false claims and empower your drivers

### Track trip history

Locate vehicles, see high-risk events in context, or request video evidence of events as needed

## Active Driving Safety

Enhance the in-cabin experience with context aware driving assistance

## Personalized Coaching

Know who's the riskiest and safest drivers of the fleet and get insights on who needs training on what

## Reduce Losses & Costs

Better assistant, coaching & insights leads to less collisions and improves fleet efficiency

## Faster Claims Processings

Manage claims processing with the data evidence in case of collisions to smoothen claim process and find who's at fault

## Intelligent Driver Management

Manage your drivers with frequent evaluations and scoring along with driving pattern helping in route risk assessment

## Curated Events

DOPE continuously reviews, analyses and reports real-time action (from the road) in a matter of seconds

## FOTA Updates

Learn from driver behavior and update the AI to adapt to driving style for improvised assistance with FOTA updates

## Recognize & Track Drivers

Recognize, Track & Trace your drivers en-route and get ELD for your drivers

## Incentivize Good Behavior

Incentivizing the good behavior and encourage safe driving practices lead to optimize operations for a fleet

## Actionable Fleet Safety Insights

Recognize, Track & Trace your drivers en-route and get ELD for your drivers

drivebuddyAI is a deep technology startup that was founded in 2018 to enhance driving safety with AI powered autonomous driving solutions. drivebuddyAI's products deploy intelligent driver & fleet safety platform for automotive, fleet, logistics and the insurance industry globally.

The startup is one of the very few technology companies in the domain which deploys Edge AI to provide active assistance to drivers for avoiding collisions and helping fleets and logistics companies to reduce losses. Driven by a team of tech experts and entrepreneurial minds who come from versatile and dynamic backgrounds, the company is targeting the future of autonomous mobility, claims-processing and underwriting at a global level, accelerating the traditional industry and conventional forms, by bridging the gap between the latest technology and legacy products.
